

Load Cell Pressure Test Kit MK15300

External Digital Load Cell

It's important to periodically check your polishing machine pressure output with an external load cell to ensure pressure amounts that are being requested by the polishing machine are the actual amounts being applied. This user-friendly pressure gage is used in coordination with all Domaille Engineering polishing machines to provide visual indication and verify that the internal load cell pressure output is accurate, allowing user to calibrate pressure variance as required.

Accessory Features:

- Allows user to verify and/or calibrate their polishing machine internal pressure
- Provides user confirmation of suspected pressure issues
- Able to test all max pressure polishing machine amounts
- Accurate to +/-0.01lbs
- Compatible with all Domaille Engineering polishers
- Directly hooks up to 5300 model / V7.04 software and newer models/software.
- 5200 and older models compatible with laptop
- Works in concert with polisher pressure calibration program via System Config tab & Load Cell Calibration option in the drop-down menu
- USB cable & software included
- Annual recalibration to NIST standards available through Domaille Engineering
